---

## Experience

Proximus

Network Transformation Manager at Proximus

January 2013 - Present (13 years 2 months)

Still at the Proximus department of Network Construction, I am responsible for the incubation of a major network consolidation and transformation project, called Mantra+. The Mantra+ project aims at executing a first stage of legacy copper out phasing and transforming the network into a virtually building-less network. I.e. the legacy central offices will be replaced by a next generation POP under the form of a standard Telco container concept. One of the key spin-off projects of Mantra+ is the fiberization of the enterprise installed base (from copper to fibre).
